

PARTNERS AND INVESTORS

You bring infrastructure, customers or capital. We deliver the AI strategy and the systems that run on it.

1tm solutions is a software-first AI agency with offices in Ulm/Neu-Ulm and Brandenburg/Berlin, Germany. We develop AI strategies, decide the architecture and build the systems that then run in production, on more than 20 years of software development. Sales, consulting at scale and training come from our partner DATENMASSIV.

Software development

20+ years

in the team, now focused on AI

From briefing to live

WHO THIS IS FOR

Who we work with

Data centres and hosting providers

Architecture, build and operation of the AI layer on your certified infrastructure, with applications your customers use right away.

Software and IT service companies

Engineering capacity for your customers' AI projects, as a subcontractor or jointly in the project.

Companies with an AI initiative

Strategy and architecture before the first line of code, then the system itself, until it runs day to day.

Investors

An engineering team with running products and references, plus sales and training through DATENMASSIV.

Most AI projects stall between the demo and production.

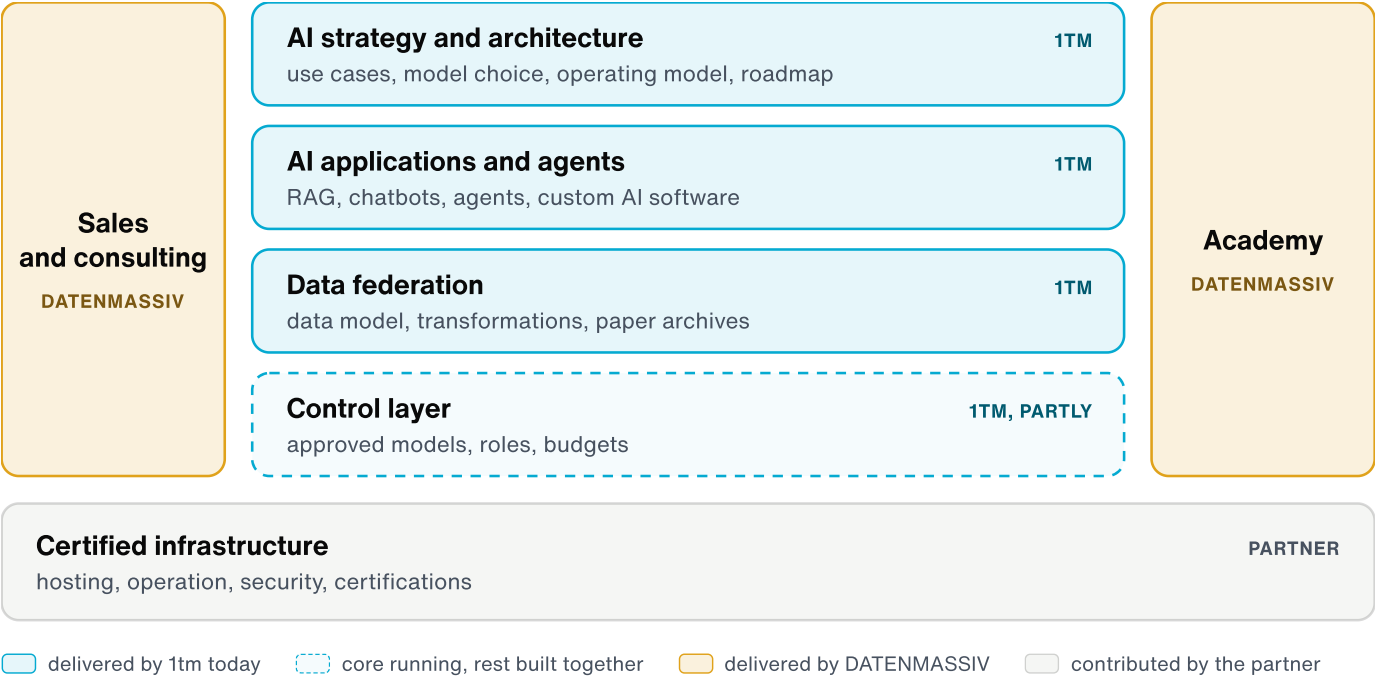

- 1

A demo is built quickly. In production the data is missing, permissions are unclear, and nobody owns the system once it runs.
- 2

That is why every AI initiative first needs a strategy: which use cases pay off, which data may reach which model, who operates the system and what it costs.
- 3

Strategy without delivery stays on paper, delivery without strategy stays a one-off. From one team, the hand-over where most projects lose time disappears.
- 4

1tm delivers both. DATENMASSIV adds customers, consulting at scale and training, the partner adds the infrastructure.

What we bring to a joint venture

Each block opens with what it means for the venture, followed by the evidence.

AI strategy and architecture

1tm delivers

Before anything is built, it is settled which use case pays off and which architecture carries it.

We turn goals into an AI roadmap: use cases by value and effort, data situation, model choice per data class, operating model and running costs.

Architecture decisions are written down with their reasons: cloud model or local model, RAG or agent, off-the-shelf or custom software. It stays traceable why a system is built the way it is, for investors and auditors too.

Evidence: AI consulting & strategy service; customer onboarding via DATENMASSIV's KI-First Audit

AI applications and agents

1tm delivers

The use case becomes a system that runs day to day.

RAG systems over company knowledge, AI chatbots for customer service and websites, AI agents and automation, local language models and custom AI software.

For SchaumPo the product went live six weeks after the briefing, in time for its TV appearance. Further projects: product descriptions for online shops and a news analysis that finds sales signals.

Evidence: SchaumPo, client projects in retail and sales, seven service pages on 1tm.solutions

Data federation

1tm delivers

Data decides whether an AI system holds up.

KI-ProduktInfo turns product images and sources into structured attributes with confidence scores and hands them to the ERP via API, for example Navision. In retail, five hours of data maintenance a day become a quarter of an hour.

We designed and built arcafind with Museum Ulm: more than 30,000 pages in old German handwriting and blackletter print, searchable, with a source for every field. For nextmuseum.io we deliver backend and data.

Evidence: KI-ProduktInfo, arcafind, nextmuseum.io

Control and platform

1tm delivers the core

One login, one permission model and approved models across all tools.

KI Hub combines chat, knowledge base, agents, workflows and transcription under one login and one data processing agreement. The platform is in beta; budgets per role and model choice by data class are built out with the partner.

Evidence: KI Hub (beta)

Sales, consulting and academy

DATENMASSIV delivers

DATENMASSIV brings customers, consulting at scale and the training that turns systems into daily usage.

DATENMASSIV has advised mid-sized companies and public bodies since 2013, standardises onboarding with the KI-First Audit and trains teams with Prompt Arena, AI Handshake and its own workshops. 1tm builds and runs what is agreed there.

TRACK RECORD

Where we have done this before

6 weeks

SchaumPo

From briefing to go-live, in time for its appearance on the German TV show "Die Höhle der Löwen".

30,000+ pages

Museum Ulm

Historic records in old German handwriting and blackletter print made searchable with arcafind.

15 minutes

Online retail

Instead of five hours of product data maintenance a day, with KI-ProduktInfo handing data to the ERP.

THE PEOPLE BEHIND IT

Team and companies

A small team with more than 20 years of software development that owns

strategy and delivery itself.

Martin Schubert

Managing director, AI consulting, development and corporate strategy

Toni Thomä

CTO, AI development and software architecture

Markus Wahl

Team, Software development, marketing, B2B and e-commerce

Thomas Wild

Team, E-procurement, SAP and B2B solutions

1tm solutions GmbH

AI strategy, software architecture and production AI systems, from concept to operation.

Insel 17, 89231 Neu-Ulm, Germany. Local court Memmingen, HRB 19074

DATENMASSIV GmbH

Sales and delivery partner: AI consulting for mid-sized companies and public bodies, KI-First Audit, workshops and academy.

Zeitblomstraße 31/2, 89073 Ulm, Germany. Local court Ulm, HRB 729394

WORKING TOGETHER

How we can come in

The form follows the venture. We can start right away because the team and the components already run.

Technology partner

We own strategy, architecture and the layer above your infrastructure, and contribute our products.

Engineering partner

We build and run AI systems for your customers, commissioned per project or as a subcontractor.

Equity partner

We contribute the team, the products and, through DATENMASSIV, customer access to a joint company.

See the systems running

In a 60-minute live demo we show KI Hub, KI-ProduktInfo and arcafind, with your questions on the table. Afterwards you know how far along a joint venture would already be.

Talk to us directly

Call or write to us. We reply within one working day.
